```java
import java.util.Scanner;
public class NonaRusu_Scanner {
    public static void main (String [] args) {
        Scanner xy=new Scanner (System.in);
        int x=xy.nextInt ();
        int y=xy.nextInt ();
        int h=60;
        System.out.println("Perioada exprimata in minute este - "+(h*x+y));

        Scanner ab=new Scanner (System.in);
        int a=ab.nextInt ();
        int b=ab.nextInt ();
        System.out.println("Lungimea ipotenuzei triunghiului este - "+(Math.sqrt(a*a+b*b)));

        Scanner pm=new Scanner (System.in);
        int p=pm.nextInt ();
        int m=pm.nextInt ();
        int k=100-p;
        int n=(100*m)/k;
        System.out.println("Avem nevoie de "+n+" kg de fructe, pentru a obtine "+m+" kg fructe uscate.");

    }
}
```
